

## Site Pro Dispatch

### Farm Works Software

Hamilton, IN - Farm Works has introduced a new innovative product for co-ops, agronomy dealers, and custom applicators called **Site Pro Dispatch**. Site Pro Dispatch takes advantage of wireless technologies to streamline data transfer from the office to the field. Important client data, such as variable rate application maps, target soil sample points, and work orders can be transferred to the field from the office within seconds. Applicators avoid using memory cards for data transfer and reduce driving time on the road. When the job is complete, data is quickly sent back to the office to update client field records, inventory control, and billing.

Dispatchers in the office have the ability to see a live map that shows where all the applicators are at any given time. The dispatcher can influence the movement of equipment in order to reduce fuel usage and improve productivity. "If a business has dispatched applicators to multiple locations, the dispatcher has access to all this information and can easily assign the next job with a click of a button," says Scott Nusbaum, President of Farm Works.

Farm Works also offers an add-on module to Site Pro Dispatch called **Farm Works Google Earth**. This allows others to see the location of sprayers or other equipment without purchasing additional desktop software. The integration of Google Earth™ allows Farm Works to use high quality aerial photos to view applicator locations using the Internet. A password and username is needed to view this information online.

Site Pro Dispatch retails for \$2000. This includes the industry leading **Site Pro** desktop software for field record-keeping and GIS mapping. Site Pro Dispatch also requires the Farm Works "Mate" field solutions for sending and receiving wireless information. The field solutions install on any mobile device with a Windows™ operating system, such as a laptop or pocket handheld computer. This allows applicators to complete work orders, soil sample, map field boundaries, perform variable rate application, or integrate guidance and auto steer.
