

Site Mate “3D” Interface

This new interface makes it easy to see previously driven passes in a 3D mode in the Map tab. When you are in 3D mode, your map will rotate so your direction of travel is always up and you can see adjoining passes where you have driven. When used with Guide Mate it is even easier to see upcoming turns for contour and last pass mode.

The minimum requirements for this feature to be active are:

- Version 2008
- Site Mate Scouting, Site Mate VRA, or Guide Mate

To turn on the 3D view is Site Mate tap inside the 2D circle in the upper left hand corner of the program. To switch back to the overhead (2D) view, tap inside the 3D circle on the screen.
