

Importing Boundaries from Site Mate

- 1) Synchronize the Site Mate Log Files within the Farm Works project on your desktop. For instructions see Synchronizing Site Mate under our FAQ section.
- 2) The synchronized files will be listed in the Tree View on the left hand side of the screen. Double left click on the Site Mate Boundary file to display in the Map Tab.
- 3) On the Map Tab, right click on the boundary and select "Copy".
- 4) Remove the layer from display by right clicking on the layer name in the Displayed Layer column and select "Remove from Display".
- 5) Right click on the Field Name listed in the Tree View on the left hand side of the screen, and select "Edit Boundaries".
- 6) On the Map Tab right click and select "Paste Addition", this will add the copied Site Mate Log file to the boundary layer.
- 7) Select the "Save and Close Editing" button from the Mapping Toolbar to record the boundary.
