

To use these maps with Site:

1. Unzip the contents of the downloaded file(s) to your machine. (example location may be a folder on your desktop called "county maps")
2. Load the project in which you wish to use the maps using the Project Selection Dialog.
3. Right click on the unassigned client or the specific client that the maps are for, and choose import background
4. Press the Browse button, and navigate to the directory in which you extracted the files to in step #1.
5. Choose file for the county that you wish to import and press OK.
6. Continue choosing and importing layers until you have brought in all the states you downloaded. If you desire the state boundary map, you will need to import the US Map, because State lines are not represented on the individual county maps.
7. Press the "A" key or select the Zoom All button. You should now see a map of the United States, with a detailed map of the counties in your State.
